Personal Reflection - Week 2

- *What do I want to learn or understand better?* For one, I'd like to learn how to create apps on Android or IOS. Less technically, I still am working on learning how best we all work together.
- *How can I help someone else, or the entire team, to learn something new?* From a technical perspective, I can help with using APIs or web scraping if necessary. I also have a lot of experience with programming in Python following specific style guides, so I can help teach that as well. Apart from that, I've actually had a job that used agile somewhat so I can take lessons learned there to this team.
- *What is my contribution towards the team's use of Scrum?* In my last job, we used a couple programs for managing sprints and task estimation. At the same time, the actual principles of agile and scrum weren't followed well which taught me some lessons in what can make or break an efficient system of working.
- *What is my contribution towards the team's deliveries?* I will be doing much of the backend work on communication with APIs and likely organizing data to be sent to the frontend. I'm unsure yet, but I may also help with the frontend of the app.
