Personal Reflection - Week 6

- *What do I want to learn or understand better?* At this point, I think what I can learn more about is how to work with the UI and also more on collaboration between people working on separate parts of a project.
- *How can I help someone else, or the entire team, to learn something new?* As the person doing most of the work on the API-facing code, I can help a lot with people trying to use information from it and understand how it works.
- *What is my contribution towards the team's use of Scrum?* As before, I'm helping with team meetings and exercises. As well, I'm keeping on top of user stories and tasks in Trello that I am involved with and also reviewing the work others do.
- *What is my contribution towards the team's deliveries?* I added support for multiple APIs now and simplified the process of adding more. I also have the framework in place for accessing the weather data for any given time.
